

PROFESSIONAL SERVICES

powering Clone Guard® Security Consulting

Gain instant access to critical security expertise and technology for ongoing assistance with improving your security posture and compliance with Clone Systems' Professional Services

Assess the current security state of your business and solutions and identify and prioritize any gaps that need to be remediated to reduce risk

- ✓ **Map your businesses security controls to the regulatory and compliance frameworks relevant to your industry** to validate compliance and identify any risks that need to be addressed
- ✓ **Focus on the interactions between users, apps and data** to ensure security controls, process and policies are effective and resilient to common attack scenarios
- ✓ **Evaluate your Disaster Recovery (DR) and Business Continuity (BC) plans** and provide feedback aimed at helping you minimize business interruptions and manage through unforeseen disasters
- ✓ **Develop a roadmap for evolving and maturing your security posture** that can be reviewed with senior leadership to share progress and position justifications for additional resources

Review the security tools and technologies deployed in your organization and receive feedback on their effectiveness and guidance on additional solutions that can strengthen your defense against emerging cyber security threats

- ✓ **Extensive vendor agnostic security knowledge with a deep understanding of the latest best practices used to help you navigate the array of security solutions and technologies in the marketplace** so you can select the tools that provide the most benefit to your organization and reduce your business risk
- ✓ **An expert team of security engineers with extensive experience defending against cyber security threats** of all types and across many industries
- ✓ **Robust networking knowledge versed in secure network architecture and topology design for small and large scale business networks** spanning physical, virtual and cloud service environments
